North Kingstown School District

ISI was engaged by North Kingstown School District to perform a district wide security assessment. The assessment included a complete review and analysis of existing conditions at each school, interviews with each school's principal exploring procedures and concerns and interviews with the local law enforcement.

The deliverable included pre-design and budgetary figures for access control, video surveillance, public address, alarm systems, communications, emergency lockdown and door hardware solutions to improve the physical security of the district's schools. ISI presented new and enhanced procedures to the North Kingstown School District.

University of Massachusetts Amherst

The University of Massachusetts Amherst Physical Plant Lock Shop secures and protects approximately 6.5 million square feet of assignable space and processes 4,000 work requests each year. The university publicly requested a proposal for consultative services to address their aging key systems, an expired patent protected keyway and access control procedures.

ISI is providing leadership and experience to the process of examining the current situation of the various keying systems on campus as well as the multiple access control systems that were not integrated. ISI is also reviewing personnel roles and responsibilities and aligning methodical and lean processes to the lock shop functions. ISI's services will include specification for keying standards with budgeting and an implementation plan, a creation of policies and procedures, project management for implementation of changes and documentation captured in Revit.

Specifications

Fitchburg State University Hammond Hall

Hammond Hall is the living room of the Fitchburg State campus. Home to the library, game room, The North Street Bistro, the bookstore and the Falcon Hub, ISI was hired to work directly with the architect to develop the access control and asset protection specifications for the five phase Hammond Hall renovation project at Fitchburg State University.

ISI wrote the division 28 specification documents and produced all phases of plans utilizing Revit in the architect's central project file. ISI influenced the product installed for tight integration across disciplines because of early collaboration with the door hardware specifier.

Specifications

Dudley Square Municipal Complex

The future home of the Boston Public School administration. ISI provided design and specification services for access control, burglar and video surveillance systems.

Because ISI was involved early in the design process, we were able to protect the client's district wide security systems from substitutions and we ensured their existing systems were expanded into this project. ISI continues to respond to RFIs and has begun punch list process as this project is in the construction phase.

Integration

State of Rhode Island

ISI provides a number of integration services to the State of Rhode Island. These services include electronic access control, door hardware, video surveillance, wireless mesh networking, intercom and badging services.

Master Key Design

Fidelity Investments

ISI continues to service Fidelity as an ongoing provider of master key design and deployment services. ISI performed an initial assessment of Fidelity Investments Locksmith Department to identify opportunities for improvement along with the risks associated with current systems. After the assessment ISI provides a detailed report of all findings in conjunction with solutions for each and the costs associated with the recommendation.

ISI continues to provide master key design services and implementation nationally for Fidelity's investment centers.

LEVERAGING 40+ years as one of New England's few **full service security integrators** by offering both mechanical and electronic security solutions.

INTEGRATING contract hardware, electrical engineering, life safety, and security with design elements from project inception to achieve maximum value.

SPECIFYING a cost-effective, on-target solution that utilizes the many talents of the various involved parties, ensuring that everyone works well together. Fully implemented **BIM** program to help minimize costly change orders.
